*Mathematician / Junior Backend Developer*

### Professional Summary

Passionate mathematics graduate with a strong analytical background and a deep interest in data analytics and software development. Proficient in Python, JavaScript, and SQL, with experience in both individual and collaborative web projects. Eager to apply mathematical reasoning and technical expertise to solve complex problems and deliver data-driven insights. Committed to continuous learning and growth, with the goal of pursuing a career as a Data Scientist or Software Engineer, building robust and scalable applications.

### Computer Skills

|                                |                                                                                                                      |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------|
| Programming Languages          | Python (pandas, NumPy, Matplotlib, Seaborn), JavaScript (ES6), HTML5, CSS, SQL                                       |
| Data Analytics & Visualization | Data cleaning, exploratory data analysis, statistical modelling, dashboard creation, advanced Excel, Tableau (basic) |
| Tools & Platforms              | Linux (Ubuntu, WSL), Git, VS Code, Jupyter Notebook, MySQL, PostgreSQL                                               |
| Other                          | jQuery, MATLAB, $\LaTeX$ , Agile methodologies                                                                       |
| Portfolio                      | GitHub profile – includes web applications, data analysis scripts, and collaborative projects.                       |

### Professional Experience

- 11/2012–06/2021 **Math Tutor**, *Self-employed*, Athens, Greece.
- Provided personalised tutoring to university and senior high school students across a broad spectrum of mathematical disciplines.
  - **Subjects covered:** Calculus, Analysis, Differential Equations, Linear Algebra, Probability & Statistics, Geometry, Propositional Calculus, and Python programming.
  - Designed customised lesson plans and problem-solving strategies, leading to measurable improvements in student performance and confidence.
  - Supported students with exam preparation and project work, cultivating critical thinking and analytical skills.

---

## Projects

- Data Analysis Projects – Performed exploratory analysis and visualisation of public datasets using Python libraries (pandas, Matplotlib, Seaborn).
- Web Development – Built responsive, interactive websites using HTML5, CSS, JavaScript, and Node.js.
- SQL Scripts – Designed and queried relational databases to extract and report actionable insights.

---

## Education

- 2010–2021 **BSc in Theoretical Mathematics (pending)**, *University of Crete, Greece.*
- Specialisation in Differential Equations, Computational Mathematics, Geometry, and Probability Theory.
  - Relevant coursework: Real Analysis, Abstract Algebra, Topology, Numerical Methods, Mathematical Statistics.
  - Thesis (ongoing): dynamical systems and numerical simulations.

---

## Languages and Additional Information

|                 |                                                  |                                                   |
|-----------------|--------------------------------------------------|---------------------------------------------------|
| Greek           | <b>Native</b>                                    |                                                   |
| English         | <b>B2 Certificate (since 2007)</b>               | <i>Fluent in written and spoken communication</i> |
| French          | <b>A2 Certificate (since 2007)</b>               | <i>Basic conversational skills</i>                |
| Interests       | <b>Basketball, Chess, Music, Problem Solving</b> |                                                   |
| Military Status | <b>Fulfilled</b>                                 |                                                   |
